

Product Group KBKZ2B

Hauling rope made of steel with clear plastic coat for assembly and increasing the tensile strength of cable chains KBKCUB, KBKCMX, KBKPRO and KBKPM

Material

- Rope: steel
- Coating: plastic

Product information

- Assembly rope can be used for "KBKCUB", "KBKPRO" and "KBKPM".
- Assembly rope increases significantly the tensile strength of the cable chain.
- Cable chains "KBKCUB", "KBKPRO" and "KBKPM" can be assembled to the rope either moved together or pulled asunder.
- By pushing the chain links together, a closed cable duct is created which achieves a high degree of stability, e.g. for use in passageways.
- Fastening can be carried out using article "KBKPROZ1".
- Fixing of the rope can be carried out by fixing bush "KBKZ2C" (with levelling screw).
- Assembly rope will be shifted through the middle tunnel aperture of the cable chain.
- The individual chain links can be moved due to the precisely fitting design.
