

Kabelmanagement Cable management

Walter Bethke GmbH & Co. KG

Das 1963 gegründete Familienunternehmen Walter Bethke GmbH & Co. KG liefert jährlich mehr als 130 Millionen qualitätsgesicherte technische Kunststoff- und Hybridteile für die verschiedensten Branchen in beinahe alle Regionen auf der Welt.

Eine betriebseigene Entwicklung und Konstruktion mit Werkzeug- und Apparatebau ist in diesem Kontext für unsere rund 40 hochqualifizierten Mitarbeiter ebenso selbstverständlich, wie die hauseigene Montage oder die Veredelung der bei uns auf modernsten Spritzgießmaschinen gefertigten Teile.

Durch eine perspektivische Logistik mit über 80 Millionen Teilen in unserem eigenen Lager und eine hocheffiziente IT-Struktur sind wir jederzeit in der Lage, unseren verschiedenen Kunden branchenorientiert „alles aus einer Hand“ zu bieten – und das zu fairen Konditionen.

Walter Bethke GmbH & Co. KG, a family firm founded in 1963, supplies more than 130 million quality assured technical plastic and hybrid parts each year to a wide range of industries located right around the globe.

The company employs some 40 highly qualified staff and has its own development and design departments (including tool and machine building), plus assembly and finishing for parts produced using the latest injection moulding machines.

Our state-of-the-art logistics system, excellent IT and the over 80 million parts in stock mean that we can offer customers in diverse industries joined-up solutions at a moment's notice – at highly competitive prices.

Outstanding features for ergonomically, high quality designed furniture

The guiding system
KBK Cube wins through its
clean design and high level
of functionality.

The integrated flexible
2D/3D system is designed
to unroll automatically
and adapt to height
adjustable desks.

KBK Cube, KBK Outlet Switch

KBK Cube, KBK Outlet Z31

2D/3D function for ergonomically designed
furniture

When pulled apart, the
KBK Cube system rolls like a
caterpillar track.
When subjected to side
forces, KBK Cube stays in the
set position.
Pushed together the cable
chain becomes a closed
cable channel.

Easy-Zip
Tool free installation, like a zipper

Flexible in length
Also useable as closed cable
channel

2D/3D capability
Rolling characteristic optimised for
ergonomic furniture

Turning force stability
Stability due to patented connection

Tread proof
Tread proof stretched up to 80 kg
Tread proof telescoped up to 100 kg

KBK Switch
Junction box for networks with up
to 3 connection points

KBK Cover
Compatible to KBK Cover
ceiling outlets

KBK Outlet
Compatible to KBK Outlet
floor outlets

Floor Outlet
Compatible to all common
floor outlets

Optional rigid cable channel
Mounting bar with hold adapter to
use as rigid cable channel

Outstanding features for ergonomically, high quality designed furniture

KBK Cube is equipped with many innovative functions. The integrated 2D/3D system has been optimized for ergonomic furniture so that it unrolls automatically with height adjustable desks like a caterpillar track.

If certain higher forces are exceeded, the system is fully 3D-mobile and lengthflexible. The integrated memory function keeps the system in the desired position. KBK Cube is tread proof to a limited extent and can also be used as a closed channel. The system is compatible with KBK Cube MX, Pro, Classic and Flex II and can also be easily connected with these systems. The high-quality design level with textured surfaces meet the most demanding requirements.

KBK Cube is equipped with the KBK Zip system, whereby cables can be threaded through like a zipper. The stainless steel mounting rod, KBK Steel makes rigid mounting possible such as with desk channels or between adjoining tables. The KBK Rope tension cord can resist traction forces up to 100 kg (ceiling suspension). KBK Cube is about 35% compressible and can optional be laid as a closed channel with or without the KBK Steel mounting rod. It can be made anti-slip on carpets by means of KBK Tape.

The tread proof system

The integrated 2D/3D system has been optimized for ergonomic furniture so that it unrolls automatically with height adjustable desks like a caterpillar track. If certain higher forces are exceeded, the system is fully 3D-mobile and lengthflexible. In addition, the integrated memory function keeps the chain in the desired position.

KBK Pro is telescoped and also useable as a closed channel. The high-quality design with textured surfaces meet the most demanding requirements.

By Easy-Zip system cables can be easily threaded through like a zipper.

With the KBK Rope tension cord can resist traction forces up to 100 kg.

The stainless steel mounting rod KBK Steel makes rigid mounting possible such as desk channels or on the floor. The system is compatible with Aluminium Cable Bridge KBK Bridge and can be easily connected with these systems. This creates a fully networkable flooringsystem, in which different curves and straight lines are possible. KBK Tape velcros fix this system on carpets

The classical allround system

The guiding system KBK Classic is particularly compact and universally applicable. The system is limited tread proof. The extensive accessory range makes the system a classical allround system for every case of application. The KBK Classic can carry up to 20 cables, is flexible lengthwise and with 3 chambers allows separation of data and power cables. The innovative geometry makes “squeeze safe” side branching of individual cables possible at any point. The compact design and the KBK Zip system meet exacting demands. The system is compatible with KBK Bridge, KBK Cube, Cube MX, Pro and Flex II and can be easily connected with these systems.

The system is suitable for all applications with horizontal and vertical cable runs. Short term loads of up to 75 kg on 5 chain links at an ambient temperature of 20° are possible in limited foot traffic areas.

Compact – flexible – compatible

The guiding system KBK Flex II is free to move in 3 directions and has approx. 25% flexibility lengthwise. The functional design wins through its clear lines and precise angular form with integrated two chamber system for separated guiding of data- and power lines.

KBK Flex II is equipped with all the innovative functions. The integrated 2D/3D system has been optimized for ergonomic furniture so that it unrolls automatically with height adjustable desks like a caterpillar track. With the application of higher forces, the system is fully 3D mobile. The integrated memory function keeps the chain in the desired position. KBK Flex II is tread proof to a limited extent and can also be used as a closed channel.

The system is compatible with KBK Cube, Cube MX, Pro and Classic and can be easily connected with these systems. The high-quality design with textured surfaces meets the most demanding requirements.

The KBK Flex II system is compatible with all regular floor outlets. A wide range of accessories make the system compatible and network capable for different applications. KBK Flex II is suitable for horizontal and vertical cable guidance and is sufficiently tread proof for low foot traffic areas. Short term loads of up to 70 kg on 5 chain links at an ambient temperature of 20° are possible.

System connection to ceilings

Ceiling outlet with force induction into the plasterboard ceiling.

For connecting a KBK system to a plasterboard ceiling the stable "POM version" of KBK Cover is used. Minor forces exerted on the cable chain are transmitted directly into the suspended ceiling, whose loading capacity has to be checked. The slot to insert the cable can be closed by inserts.

The elastic clamps on the back, fix the KBK Cover in drilling depths from 1 mm to 30 mm.

Depending on the version up to 2x KBK Cube, Pro, Classic, Flex II, 1x Cube MX, Premium or Quadro are connectable.

Thickness suspended ceiling: **1 mm to 30 mm.**

Mounting on plasterboard ceiling

2x KBK Cube, KBK Cover Z19

Application of force at plasterboard ceiling up to 30 mm

Mounting with tension rope on raw ceiling

Mounting 2x KBK Cube on raw ceiling

KBK Cover without application of force into the ceiling

Ceiling outlet with force introduction into the raw ceiling.

Pulling forces acting on the KBK cable system using the pull rope KBK Rope transfer directly into the raw ceiling. Corresponding dowels are embedded in the concrete ceiling and connected to the tension rope.

On the tension rope between the links of the KBK system at a distance of about 50 cm, collars KBK Ring are installed and the power is transferred from the cable chain to the tension rope and into the raw ceiling.

By separating the catchpins at the predetermined breaking points, KBK Cover is used as a "purely cosmetic cover" (PP-version).

An overload of the suspended ceiling is impossible.

Thickness suspended ceiling: **1 mm to "endless."**
