Walter Bethke
GmbH & Co. KG

Das 1963 gegründete Familienunternehmen Walter Bethke GmbH & Co. KG liefert jährlich mehr als 130 Millionen qualitätsgesicherte technische Kunststoff- und Hybridteile für die unterschiedlichsten Branchen in nahezu alle Regionen der Welt.

Dabei ist die eigene Entwicklung und Konstruktion mit Werkzeug- und Vorrichtungsbau für die rund 40 hochqualifizierten Mitarbeiterinnen und Mitarbeiter ebenso selbstverständlich wie die eigene Montage oder die Veredelung der auf modernsten Spritzgussmaschinen gefertigten Produkte.

Durch eine vorausschauende Logistik mit über 80 Millionen Teilen im eigenen Lager und einer hocheffizienten IT-Struktur sind wir jederzeit in der Lage, unseren unterschiedlichen Kunden branchenorientiert „alles aus einer Hand" zu bieten - und das zu fairsten Konditionen.

Founded in 1963, the family-owned company Walter Bethke GmbH & Co. KG supplies more than 130 million quality-assured technical plastic and hybrid parts for a wide range of industries in almost every region of the world every year.

In-house development and design with tool and fixture construction is just as much a matter of course for the approximately 40 highly qualified employees as in-house assembly or finishing of the products manufactured on state-of-the-art injection moulding machines.

Thanks to forward-looking logistics with over 80 million parts in our own warehouse and a highly efficient IT structure, we are always in a position to offer our various customers "everything from a single source" in an industry-orientated manner - and at the fairest conditions.

Was auch immer Sie suchen: In unserem Gesamtkatalog oder in unserem tagesaktuellen Webshop werden Sie fast immer fündig. Und sollte einmal nicht das Passende dabei sein, sprechen Sie uns an. Unser Verkaufsteam berät Sie gerne und findet gemeinsam mit Ihnen eine Lösung.

Mit besten Grüßen

Klaus-Dieter Bethke und Burkhard Bethke
Geschäftsführer der Walter Bethke GmbH & Co. KG

Whatever you are looking for: You will almost always find what you are looking for in our complete catalogue or in our online shop, which is updated daily. And if you can't find what you're looking for, just get in touch with us. Our sales team will be happy to advise you and work with you to find a solution.

Best regards

Klaus-Dieter Bethke and Burkhard Bethke
CEOs of Walter Bethke GmbH & Co. KG

Die Walter Bethke GmbH & Co. KG ist nach ISO 9001 und ISO 14001 zertifiziert

The Walter Bethke GmbH & Co. KG is certified to ISO 9001 and ISO 14001

Contents:

KBK *Cube*

Outstanding features for ergonomically, high quality designed furniture

The guiding system KBK Cube wins through its clean design and high level of functionality.

The integrated flexible 2D/3D system is designed to unroll automatically and adapt to height adjustable desks.

KBK Cube, KBK Outlet Switch

KBK Cube, KBK Outlet Z31

2D/3D function for ergonomically designed furniture

When pulled apart, the KBK Cube system rolls like a caterpillar track.
When subjected to side forces, KBK Cube stays in the set position.
Pushed together the cable chain becomes a closed cable channel.

Easy-Zip
Tool free installation, like a zipper

**Flexible in length**
Also useable as closed cable channel

KBK *Cube*

Outstanding features for ergonomically, high quality designed furniture

KBK Cube is equipped with many innovative functions. The integrated 2D/3D system has been optimized for ergonomic furniture so that it unrolls automatically with height adjustable desks like a caterpillar track.

If certain higher forces are exeeded, the system is fully 3D-mobile and lengthflexible. The integrated memory function keeps the system in the desired position. KBK Cube is tread proof to a limited extent and can also be used as a closed channel. The system is compatible with KBK Cube MX, Pro, Classic and Flex II and can also be easily connected with these systems. The high-quality design level with textured surfaces meet the most demanding requirements.

KBK Cube is equipped with the KBK Zip system, whereby cables can be threaded through like a zipper. The stainless steel mounting rod, KBK Steel makes rigid mounting possible such as with desk channels or between adjoining tables. The KBK Rope tension cord can resist traction forces up to 100 kg (ceiling suspension). KBK Cube is about 35% compressible and can optional be laid as a closed channel with or without the KBK Steel mounting rod. It can be made anti-slip on carpets by means of KBK Tape.

KBK *Classic*

The classical allround system

The guiding system KBK Classic is particularly compact and universally applicable. The system is limited tread proof. The extensive accessory range makes the system a classical allround system for every case of application. The KBK Classic can carry up to 20 cables, is flexible lengthwise and with 3 chambers allows separation of data and power cables. The innovative geometry makes "squeeze safe" side branching of individual cables possible at any point. The compact design and the KBK Zip system meet exacting demands.
The system is compatible with KBK Bridge, KBK Cube, Cube MX, Pro and Flex II and can be easily connected with these systems.

The system is suitable for all applications with horizontal and vertical cable runs. Short term loads of up to 75 kg on 5 chain links at an ambient temperature of 20° are possible in limited foot traffic areas.

KBK *Flex II*

Compact – flexible – compatible

The guiding system KBK Flex II is free to move in 3 directions and has approx. 25% flexibility lengthwise. The functional design wins through its clear lines and precise angular form with integrated two chamber system for separated guiding of data- and power lines.
KBK Flex II is equipped with all the innovative functions. The integrated 2D/3D system has been optimized for ergonomic furniture so that it unrolls automatically with height adjustable desks like a caterpillar track. With the application of higher forces, the system is fully 3D mobile. The integrated memory function keeps the chain in the desired position. KBK Flex II is tread proof to a limited extent and can also be used as a closed channel.

The system is compatible with KBK Cube, Cube MX, Pro and Classic and can be easily connected with these systems. The high-quality design with textured surfaces meets the most demanding requirements.

The KBK Flex II system is compatible with all regular floor outlets. A wide range of accessories make the system compatible and network capable for different applications. KBK Flex II is suitable for horizontal and vertical cable guidance and is sufficiently tread proof for low foot traffic areas. Short term loads of up to 70 kg on 5 chain links at an ambient temperature of 20° are possible.

System connection to ceilings

Ceiling outlet with force induction into the plasterboard ceiling.

For connecting a KBK system to a plasterboard ceiling the stable "POM version" of KBK Cover is used. Minor forces exerted on the cable chain are transmitted directly into the suspended ceiling, whose loading capacity has to be checked. The slot to insert the cable can be closed by inserts.
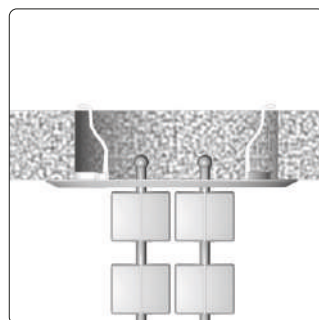

The elastic clamps on the back, fix the KBK Cover in drilling depths from 1 mm to 30 mm.

Depending on the version up to 2x KBK Cube, Pro, Classic, Flex II, 1x Cube MX, Premium or Quadro are connectable.
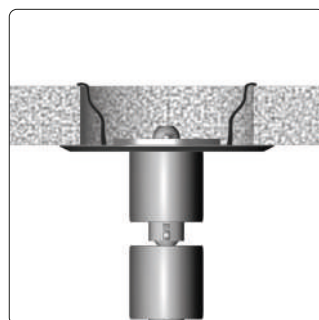

Thickness suspended ceiling:
**1 mm to 30 mm.**

Mounting on plasterboard ceiling

2x KBK Cube, KBK Cover Z19

Application of force at plasterboard ceiling up to 30 mm

KBK Rope
KBK Ring
Mounting with tension rope on raw ceiling

KBK Rope
KBK Ring
Mounting 2x KBK Cube on raw ceiling

Catchpins at breaking point to quarry out
KBK Cover without application of force into the ceiling

Ceiling outlet with force introduction into the raw ceiling.

Pulling forces acting on the KBK cable system using the pull rope KBK Rope transfer directly into the raw ceiling. Corresponding dowels are embedded in the concrete ceiling and connected to the tension rope.
On the tension rope between the links of the KBK system at a distance of about 50 cm, collars KBK Ring are installed and the power is transferred from the cable chain to the tension rope and into the raw ceiling.
By separating the catchpins at the predetermined breaking points, KBK Cover is used as a "purely cosmetic cover" (PP-version).
An overload of the suspended ceiling is impossible.

Thickness suspended ceiling:
**1 mm to "endless."**
